EDUCATION

CLEMSON UNIVERSITY

Ph.D. in ELECTRICAL AND COMPUTER ENGINEERING

Jan. 2018 – May. 2024

GPA: 4.0

ROCHESTER INSTITUTE OF TECHNOLOGY

Master of Science in ELECTRICAL ENGINEERING

Aug. 2012 – Sep. 2014

EAST CHINA UNIVERSITY OF SCIENCE AND TECHNOLOGY

Bachelor of Science in ELECTRICAL ENGINEERING

Aug. 2008 – Jun. 2012

SKILLS

Knowledge Deep learning, Computer Vision, Adversarial/Robust machine learning, Model compression
Language & Tool Python, Pytorch, TensorFlow/Keras, Numpy, Scikit-learn, Pandas, Vim, Docker, Git, Shell, \LaTeX

WORKING EXPERIENCE

Research Fellow

Oct. 2024 – Present

National University of Singapore, Singapore

- Conduct research on univariate/multi-variate and relational time-series data generation.
- Supervise Ph.D. students for research on the privacy and security of generative models.

Deep Learning Software and Research Intern (AV Perception)

May. 2022 – Feb. 2023

NVIDIA, Santa Clara, CA, USA

- Conduct research on zero-shot robustness of ViT-based neural networks against natural corruptions such as weather conditions and natural adversarial examples.
- Received a full-time offer as a Senior Systems Software Engineer but was unable to return to the U.S. due to an unexpected visa issue.

Project Engineer

Sep. 2015 – Nov. 2017

HYC USA Inc., San Jose, CA, USA

- Worked on the design of touch/sensing test solutions for iPhone and Google Pixel.
- Coordinated design, quality, manufacturing, and operation teams to resolve production issues.

ASIC Design Engineer Intern

Nov. 2014 – Mar. 2015

OmniVision Technologies, Inc., Santa Clara, CA, USA

- Developed automated flow (scripted in Python, Perl, and Tcl) of chip power estimation, data analysis, and module-based power consumption analysis and integrated it into Cadence RC tools.

SELECTED RESEARCH AND PROJECTS

Design of Robust Vision Transformers (*Pytorch/TensorFlow/Python*)

May. 2022 – Mar. 2023

- Proposed a novel training paradigm that jointly incorporates self-emerging token labels and image-level labels and significantly enhanced clean accuracy and zero-shot robustness of Fully Attentional Networks on image classification and segmentation tasks.
- Achieved SOTA zero-shot robustness on ImageNet-A, ImageNet-R and Cityscape-C with model size of 77.3M.
- Experience with distributed training and parameter tuning of neural networks on GPU clustering such as NGC and Maglev.

Robust DNNs against Poisoning Attacks (*Pytorch/TensorFlow/Python*)

Sep. 2018 – May. 2022

- Devised a general and scalable defensive framework against clean-label backdoor attacks towards image classification tasks. Achieved up to 100% detection rate and reduced attack success rate from $\sim 90\%$ to 0% against three widespread attacks.
- Proposed a novel defense against poisoning attacks using gradual magnitude pruning. Analyzed the correlation between pruning and model robustness and improved the post-attack accuracy from 5% to over 50%.

Clean-Label Poisoning Attacks towards DNNs (*Keras/Pytorch/Python*)

Jun. 2020 – May. 2021

- Designed a generative adversarial net (GAN)-based framework for clean-label poisoned data generation that degrades the overall model accuracy.
- Built the framework using BigGAN architecture and devised a triplet loss function to improve the effectiveness and fidelity of poisoned data.
- Achieved 18% accuracy drop with only 20% poisoning ratio and 55% accuracy drop with full poisoning on modern neural networks such as ResNet, VGG and Inception-V3.
